MAHLE launches its New Electronics and Mechatronics Development Center in China

- Some 70 engineers have already taken up work in their new facility
- The focus is on developing solutions for alternative drives and expanding systems expertise
- Grand opening slated for the 2nd half of the year

A few days ago, around 70 engineers moved into MAHLE's brand-new Electronics and Mechatronics Development Center in the city of Changshu in China. They will be focusing on developing solutions for alternative drives and further expanding the company's systems expertise in electric powertrains as well as electronics and mechatronics. Further activities will include charging solutions for electric vehicles as well as thermal management applications for alternative drives. Due to the pandemic the grand opening of the new Tech Center is slated to take place in the second half of the year. The new site in Changshu will play a key role as a further innovation hub for the Group's activities in the fields of alternative drives, alongside MAHLE's major technology centers for electronics and mechatronics in Kornwestheim (Germany), Šempeter pri Gorici (Slovenia) and Valencia (Spain).

Product solutions for alternative drives of the future will be developed at the MAHLE R&D center in Changshu

"China has become a major market for MAHLE. We want to grow further here and see great potential in e-mobility, which is clearly gaining momentum in China. We therefore aim to strengthen our role as a technology partner in this region," says Michael Frick, CEO of MAHLE (ad interim) and Chief Financial Officer. "Our new R&D center in Changshu is the latest step in implementing this strategy."

MAHLE founded its new Electronics and Mechatronics business unit at the beginning of 2020 in order to bundle its activities in this key field of the future. The technology group expects sales growth in this segment to be well into double digits in the next decade.

"With our new R&D center in Changshu, we will be able to focus our extensive development expertise even more specifically on the Chinese market for the benefit of our customers," says Wilhelm Emperhoff, member of the MAHLE Management Board responsible for the Electronics and Mechatronics business unit.

MAHLE's diversified electronics and mechatronics product portfolio in the automotive sector includes numerous product solutions, such as electric drives, actuators, auxiliary units as well as control and power electronics. MAHLE has been successfully established on the market with high-voltage traction motors as well as on-board chargers and DC/DC converters for passenger cars since 2019, and has since grown strongly in this segment. In recent months, MAHLE has also been setting new benchmarks in the e-bike segment, for example with systems for gravel and city bikes. Moreover, in 2019, MAHLE entered the burgeoning Indian market for e-scooter drive systems.

About MAHLE

MAHLE is a leading international development partner and supplier to the automotive industry. The technology group is committed to playing an active role in transforming the mobility of the future by further optimizing the combustion engine, driving forward the use of alternative fuels, and laying the foundation for the worldwide introduction of e-mobility and other alternative drives, such as fuel cells. The group's product portfolio addresses all the crucial aspects of the powertrain and air conditioning technology.

In 2019, MAHLE generated sales of approximately EUR 12.0 billion and is represented in over 30 countries with more than 77,000 employees in 160 production locations and 16 major research and development centers. (Last revised: 2019-12-31)
